

# UK national perspective on training and services to support FAIR and Open Science

Helen Clare, Jisc

The EOSC Future project is co-funded by the  
European Union Horizon Programme call  
INFRAEOSC-03-2020, Grant Agreement 101017536

# Policy background

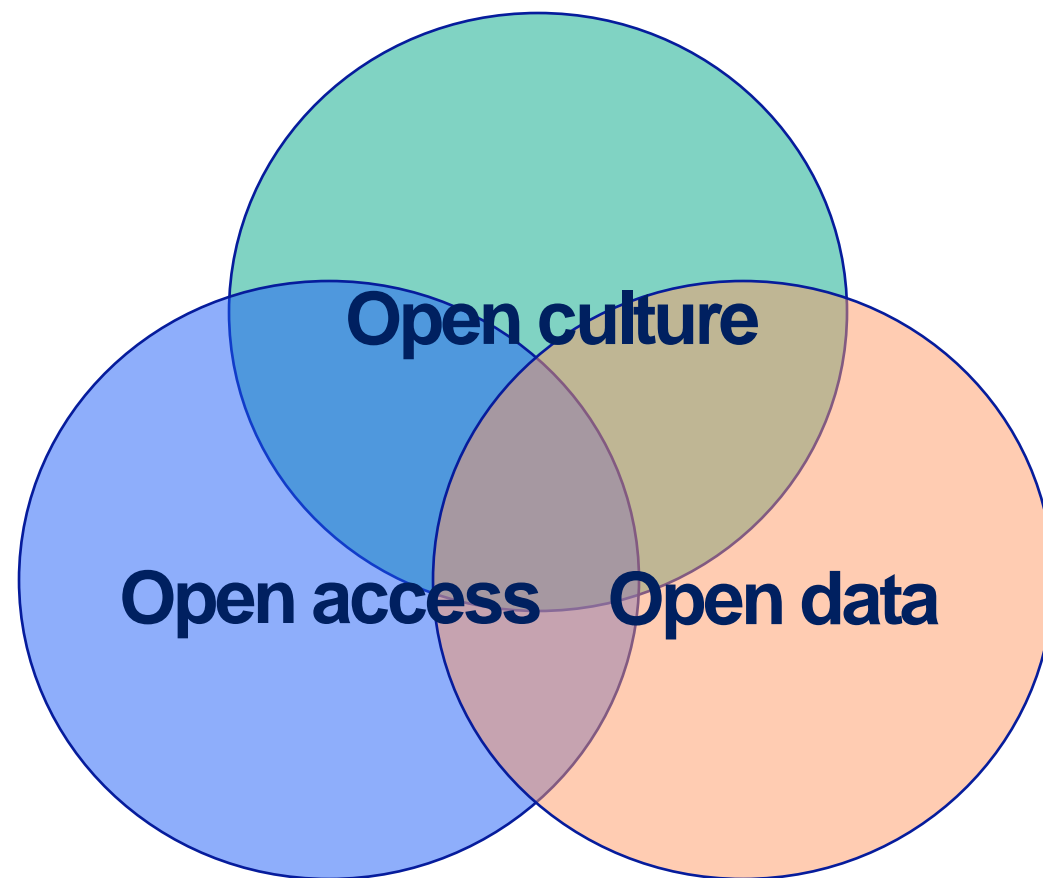

# UK's trajectory towards open research continues

UKRI strategy champions open research in three areas:

- open access to publications;
- open data, software, methods and protocols;
- open culture by reforming incentives and research assessment, recognising and supporting related skills and teams.

“UKRI aims to achieve open research data that is ‘findable’, accessible, interoperable and re-useable, (the FAIR Data Principles).”

“usually we expect you to make your data as open as possible and only closed when necessary”

interested in joining

# EOSC Knowledge Hub

Potential use for materials on EOSC and services

Focus on quality materials we can point to and reusable materials we can contextualise

Focus on making the materials as FAIR as possible (metadata, interoperable formats, materials designed to support reuse by trainers)

Work with EOSC Association Task Force on Upskilling Countries to Engage in EOSC – understand contexts and help promote use
