Open Science Monitoring in Serbia

Biljana Kosanović

Current situation

- do not have anything about monitoring in the Platform (rather old, 2018), but will have in the new one (2023)
- some OA monitor included in Graphic presentation of [WoS articles at the University of Belgrade](#)

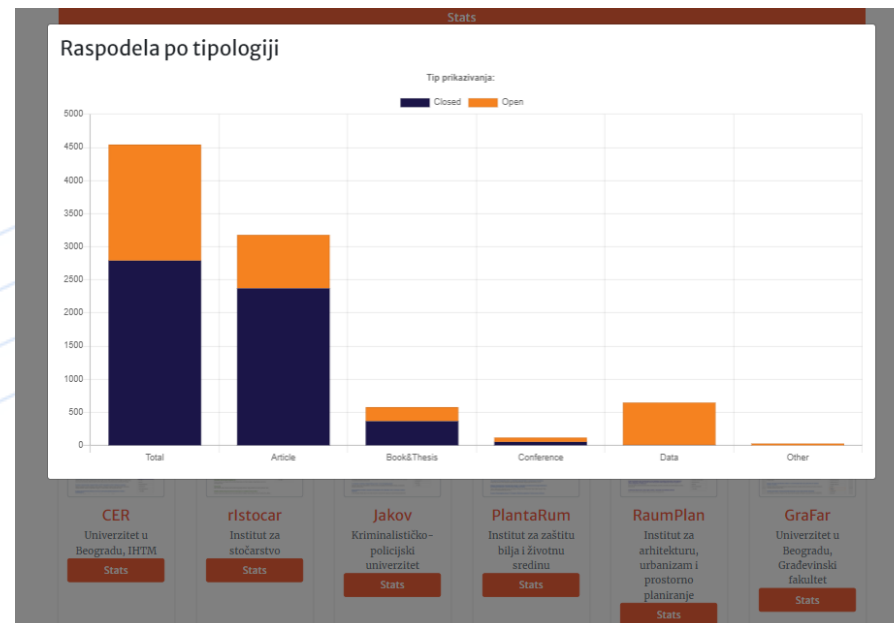

Serbia - Desired Situation

For all our repositories

- openness level (overall, and for each of them) by the document type
- planning to include much more: by year, by embargo, ...

This data is also available to OpenAIRE (and much more, since OpenAIRE harvest more data), and this is the reason why I've insisted (a lot) to have good, reliable and trustable data

Serbia – New development

National CRIS system with a lot of Openess monitor
